INCOMPATIBLE SERVICES

There are several telecom services that may already be installed to the telephone line that you wish to have ADSL delivered on, however these services will prevent the successful installation of you new ADSL service.

The table below list the main services concerned, and if this effects you, then you will need to contact your telecoms provider to discuss that matter further.

PBX Lines	A system where multiple lines are routed through a single line. For example if you need to dial "9" to gain access to an outside line, then you are probably on a PBX system.
ISDN	Digital Phone line that can connect you to the Internet.
Auxiliary Line	Enables a call to be routed to an available line.
DDI	Enables calls to be routed through a phone system, directly to a specific extension.
BT DataStream	Type of DSL service aimed at large organisations.
BT VideoStream	Type of DSL Video service aimed at large organisations.
Leased Line	Direct digital link to the internet.
Red ABC and Red Care	Monitoring services for alarm systems etc.
30K Loop	Type of roaming STD Code/Phone Number.
Featurenet 5000	Virtual Telephone Management System.
Subscriber Metering Line	Call charge monitoring system.
Pulse Meter	Call charge monitoring system similar to Subscriber Metering Line.

Phone lines connected to an internal telephone switch cannot have ADSL applied to them.

If you are unsure of what services you may have on your line then you will need to contact BT who will be able to help you.

If you have ISDN installed then you will need to have this removed before applying for ADSL. ISDN can be removed at a "close" time to the installation of the ADSL. Please ask for more details.
